

LONG TERM PAVEMENT PERFORMANCE PROGRAM DIRECTIVE

For the Technical Direction of the LTPP Program

Program Area: Monitoring

Directive Number: AWS-15

Date: October 27, 1999

Supersedes: AWS-14

Subject: Upgrade of AWSCheck Software to Version 1.4

Attached for immediate implementation please find Version 1.4 of the AWSCheck software. This new version of the program contains modifications implemented to make the software Y2K compliant and to address a problem report submitted by the Southern RCOC. More specifically, the following modifications were made in this program version:

- All date fields have been checked or modified to make the program Y2K compliant.
- Added a check to the QC report on the number of days where the daily highest minimum relative humidity exceeds the specified range (see AWSPR S-04).

The above modifications require minor changes to the documentation; however, a revised version of the Users Guide will not be provided at this time. Please continue to use the Users Guide provided with the AWSCheck v1.1 software.

AWSCheck v1.4 should be installed on computers being used to enter and process AWS data. Installation consists of copying the file AWSINSTL.EXE off the distribution diskette and into the AWSCheck directory. Once done, run the AWSINSTL.EXE program and answer "yes" to overwrite existing program files. If this procedure is followed, the AWSCheck program should be able to read and process all data previously entered and processed with v1.3 or earlier version of the AWSCheck program.

If there are any problems, please submit a AWS problem report (AWSPR) form in accordance with LTPP Monitoring Directive AWS-3.
